Hooking up with Biopharma - Tailored Solutions for the True Challenges

The ever increasing cost and regulatory constraints faced by biopharma have boosted the transition to more efficient research approaches. Advantageously, years of practice provide nowadays the foundation for the change on biopharma strategies derived from known successful tactics as well as from recurrent pitfalls.

After ten years in the drug development business, PPH plus is aware that each customer requires a distinct solution, and for the fulfillment of customer needs, a diverse, flexible and dynamic offer of adapted services is a must.

Thus, PPH plus has updated the company brochure in order to offer its customers an enhanced summary of the variety of offered services after their progressive improvement.

Taking Project Leadership to the Next Level

PPH plus project leaders will assume responsibility for the whole project, initiating, planning, managing, monitoring, and closing a given clinical study, or engage with the study team for specific work packages as, for example, for the conduct of feasibility studies and subsequent site selection, study start-up procedures, the selection of vendors, or at any study time point where proficient management could be needed.

Particularly, PPH plus project leadership services have been recently enhanced with quality planning in risk-based monitoring. PPH plus had discreetly acquired a wide-ranging experience in the skilled identification and analysis of risks and the consequent adaptation of protocols as well as study plans to objectives (what nowadays is known as 'quality by design') since long before the "risk-based" paradigm took shape under the echoed TransCelerate initiative in 2013. Prior to the "risk-based" blast, simple methods for expert analysis were implemented for tacit risk assessments. What is new, and improves the processes involved in the previously unstated quality-by-design & risk-based approach, is the incorporation of novel technologies, its procedural integration into biopharma which confers a new official print, and a naming convention.

Medical Expertise for Healthy Projects

From the project initiation until the publication of results, PPH plus medical experts cover and settles the uneasy scientific ground, ensuring the medical validity of data with due observance of the subject safety and rights. Regulatory documents, subject data, protocol deviations, coded adverse events, concomitant medications and subject medical history will pass under the sharp lens of the medical expert. In addition to skilled medical monitoring, PPH plus medical experts are ready to assess what clinical outcomes should be, have been, and will be met, train and keep a fit team on medical topics and product particulars, and proactively liaise with investigators to make sure that down to earth objectives are pursued and attained. PPH plus medical experts offer the know-how acquired on a wide spectrum of therapeutic areas over a minimum of 7 years of practice in biopharma.
